

## Non-Surgical Isolation Gown

This is a disposable, non-surgical isolation gown intended to protect the wearer from the transfer of microorganisms and body fluids in low or minimal-risk patient isolation situations. These gowns are typically made from lightweight, non-woven fabrics like polypropylene (PP), ensuring a comfortable and breathable experience. Essential for infection control, these gowns secure the wearer's clothing and skin, providing protection during procedures where contact with blood, body fluids or excretions is anticipated.

- Provides minimal to low fluid barrier protection (AAMI Level 1 or 2 equivalent) for general care.
- Made from lightweight, breathable non-woven fabric (e.g., PP or SMS) for user comfort during extended wear.
- Design ensures full back coverage in critical zones to protect the entire wearer's body.
- Features elastic or knit cuffs and a neck closure (tie or hook-and-loop) for a secure fit and seal.
- Is a disposable, single-use garment, designed to prevent the risk of cross-contamination.

### Product Specification

Category	Specification
Material	Non-Woven Fabric
Raw Material	Polypropylene
GSM	43
Size	S / M / L / XL / XXL
Cuff	Open cuff / Elastic cuff
Color	White, Green, Medical Blue, Blue
Usage	Hospital Doctor, Clinic, Surgeon
Certification	NIOSH / EN149 / US FDA / CE / ISO 9001 / ISO 13485 / WHO GMP / EN14683
